Profile

I have been passionate about creating websites and applications since the age of 15. I felt the need to better understand the world around me in a humanistic sense, so I studied Psychology and Humanities BA. For some years I had the opportunity to forge an interesting professional journey that gave me a growth-oriented mindset and a deep understanding of transparent and honest communication. Always hungry for knowledge, I decided to return to my early passion to grow as a full stack developer, motivated by the conviction that it brings me enjoyment and completeness.
